### Non-Burning Disks To Be Made Here

The Weston-Welk company of Salt Lake city, manufacturers of Economy Disks, are contemplating establishing a factory in Torrance, according to Secretary Gadeky, of the chamber of commerce, who is active in formation of a small group of men to back the industry.

The Economy Disks are a patented article, the patents being in the name of the senior member of the firm, Mr. Weston. The appliance consists of three aluminum disks of various sizes, to which are fastened calks. These disks are placed in the bottom of the cooking-utensil, calks down, and prevent the burning of the food, as well as aiding the thorough cooking of the vegetable or meat. With the use of the disks it is apparently impossible to burn the food, no matter how much heat is applied to the pot or the stage of the water in the utensil.

Mr. Weston is planning to form a company here for the manufacture of the disks and other like novelties.

In this issue Hoffman's Shoe Hospital is featuring a line of high-grade shoes for women, men and children at exceptionally low prices. This large stock was purchased right, and Mr. Hoffman is passing the saving along to his customers. Besides heavy orders have already been placed for new goods, and as his shelving room is limited, he will need the space for the new arrivals, therefore must sell his present stock at exceptionally low prices in order to move them quickly. Those who pride themselves on good footwear can do well by calling at his store and inspecting this line of shoes—and the prices, too, will interest you.—Advertisement.
