Easy, "fast" steering, long a characteristic of Nash cars, is even more evident in the 21 new models recently introduced. Nash engineers have concentrated on overcoming the "drag" of low pressure tires on the road.

America Surpasses Remainder of World For Phone Service

Out of a total of 27,783,963 telephones in the entire world on January 1, 1926, the United States possesses considerably more than half. There were on that date 16,935,918 telephones in this country, or 61% of the world's total.

The figures used in the foregoing statement are taken from a recently published compilation of telephone and telegraph statistics of the world. It has taken some time to obtain authoritative data from the more distant countries and so the most recent date for which comparable figures are available is January 1, 1926.

It is interesting to note that out of 19,389,360 telephones operated by private companies throughout the world, 16,935,918 were in the United States, and that the number of telephones per 100 population in this country is markedly greater than that in Europe.

Despite the wide diffusion of telephones in the United States, however, American cities are more highly developed than comparable foreign cities. New York, for example, had in relation to its population nearly four times as many telephones as London, nearly three times as many as Paris and over twice as many as Berlin.

Not only has the United States more telephones than all the rest of the world put together, but Americans use the telephone more than the inhabitants of any other country.
