## How to Play BRIDGE

Series 1927-28 by Wynne Ferguson

Author of "PRACTICAL AUCTION BRIDGE"

ARTICLE No. 2

What does a bid of one club indicate? A bid of one club is a contract to take in the two combined hands seven of the thirteen tricks. Of these seven tricks the club bidder should have the expectancy of at least four. As there are thirteen tricks in all, and as the club bidder has indicated by his bid that he expects to take four tricks in his own hand if clubs are trumps, there are nine tricks remaining to be won by the three other players. Each of these three players is, on average, entitled to one-third thereof, or to three tricks. These three tricks are the so-called "Average Expectancy of Support" and constitute the basis of every modern bid.

Every original bid should include two elements: First, two quick tricks against any bid the opponents may make; second, the possibility of at least four tricks provided trump is the suit named in the original bid. These two elements are important for two reasons: First, when a bid is made, the bidder never knows whether or not he and his partner will win in the final declaration. For that reason he must be just as well prepared to defend as to attack. Hence the necessity for sure tricks, that is, tricks which will win against any declaration. Second, the bidder must always be prepared to play the declaration at the bid first named by him. He must, therefore, have a suit that will take at least four tricks if it is trump, for he can, on the average, expect only three tricks from his partner. For that reason he must have length (at least four cards) as well as high cards to justify an original bid.

When a player as dealer bids one club, he tells his partner that he either has two sure tricks in the club suit (at least four cards) or one trick in the club suit and one trick in an outside suit. For example:

Hearts—10, 7, 2  
Clubs—A, K, 7, 6, 3  
Diamonds—J, 4  
Spades—10, 9, 2

Hearts—A, 7, 2  
Clubs—K, Q, 7, 6, 3  
Diamonds—J, 4  
Spades—10, 9, 2

In the first example, there are two sure tricks in clubs, the ace and the king. In the second example there is one sure trick in hearts, the ace; and one sure trick in clubs, the king queen. By sure tricks is meant the tricks that will win against any declaration, and on the first or second round of the suit. If clubs are trumps, both of these example hands should win four tricks. The partner's hand is estimated on the average to be worth three tricks; thus a bid of one club should win four tricks in the bidder's hand and three from the partner's hand, a total of seven.

Here is an interesting hand that came up recently at one of the New York Clubs:

Problem No. 1

Y :  
A : B :  
Z :

Hearts—A, Q, 3, 2  
Clubs—K, Q, 7, 4  
Diamonds—A, Q, 3  
Spades—Q, 9

No score, rubber game. Z dealt and bid one no-trump. A and Y passed and B doubled. What should Z bid?

Here is another hand that involves some of the same principles:

Problem No. 2

Y :  
A : B :  
Z :

Hearts—J, 10, 7, 6  
Clubs—J, 8  
Diamonds—K, J, 8  
Spades—J, 8, 7, 5

No score, rubber game. Z dealt and bid one no-trump. A and Y passed and B doubled. If Z redoubled and A bid two spades, what should Y bid? An analysis of these interesting hands will be given in the next article.

Problem No. 3

Y :  
A : B :  
Z :

Hearts—A, J, 6, 4  
Clubs—none  
Diamonds—K, Q  
Spades—4

If spades are trumps and Z is in the lead, how can Y-Z win five of the seven tricks against any defense? Solution in the next article.

### Chassis Oiling Is Feature of Buick

FLINT, MICH.—Buick engineers' provision for easy and positive chassis lubrication in the models for 1928 is one of the most widely appreciated features about the new car, declare dealers who are visiting the factory here this month. The dealers' praise has been doubly gratifying to factory officials because it reflects comment heard among owners of the new Buicks.

"While the dealers are enthusiastic about the style, comfort and performance of the new cars, all of which we know they would like, it is plain that some comparatively minor refinements also are 'going over big,'" said A. H. Sarvis, assistant general sales manager, who is acting as host to the visiting dealers.

"Not only women owners, but men too, are finding that the adjustable steering wheel, the redesigned seat cushions, and the remarkable accessibility of all controls from the driver's seat provide an entirely new experience in driving. And everyone who has bought the new car, apparently, appreciates its new ease of lubrication.

"The change which makes greasing of Buick for 1928 so easy is ingenious, yet simple. It is merely the extension of the inaccessible grease connections, formerly reached by crawling under the car, to a point where they may be lubricated from the side. A little taploot on either running board gives access to them. Similarly, rear grease connections, which used to necessitate lying under the rear axle, have been brought out within easy reach. The whole job of greasing may be done now in a few minutes without soiling hands or clothes."

"The refinement of Buick's lubrication system was adopted after experiments with every greasing system known. Buick engineers believe it the most practical arrangement that can be worked out, since it insures positive lubrication of every point requiring grease, and makes the job of greasing so easy that no part is likely to be slighted. They feel that it is one of the
