

Camping Rules For Motorists In Nat. Forests

Motorists who plan to tour, camp, fish or hunt in the national forests are advised in a statement by the touring bureau of the Automobile Club of Southern California that it is necessary to have permits in order to build campfires. These are now being issued by the forest service for 1935 and may be obtained at all offices of the club. They are good for the entire year and available without charge. Each person receiving a permit is required to sign an agreement to abide by the following rules, prescribed by the forest service:

Not to build fires on national forest lands which are closed to camping or to the building of fires.

Not to smoke on national forest lands which are closed to smoking, except in camps, at places of habitation, and in special posted smoking areas.

To carry a shovel and ax of specified dimensions for each automobile or pack train when camping in national forests.

To clear a space at least ten feet in diameter of all leaves, needles, and trash before starting a fire.

To leave no fire unattended.

To completely extinguish all fires with water, except fires in closed stoves or fireproofed camp grounds, which must be left in such condition that the fire cannot escape.

To extinguish completely all burning matches, cigarettes, cigars and pipe heels before disposing of them.

To maintain a clean and sanitary camp, burning or burying all refuse.

To put out all small fires discovered, or if the fire is too large to handle alone, promptly to notify the nearest federal or state forest officer.

To see that all members of one's party know of and abide by these regulations.

Giant Lubricator Oils 1200 Engines

Here is one of the rare sights the visitor encounters in the Dodge factory—a lubrication system for oiling 1200 engines simultaneously. When the tester places a newly completed engine on the run-in block, he does not bother about putting oil into the crankcase reservoir. He simply connects the engine to this central oil-pumping and filtering system.

The system has a capacity of 4,500 gallons of oil, which is circulated and filtered through six clarifiers, each capable of purifying oil at the rate of 900 gallons per hour.

An important detail in the operation of the plant is the fact that oil having passed through the engine once, is filtered before it enters the engine a second time.

Gulls Give Crows Lesson

ROCKLAND, Me. (U.P.)—A postcard addressed to the Rockland Free Press, out of existence for the past 40 years, was found when a partition was removed in the postoffice here recently. It was an order to discontinue sending the "Free Press" as the sender was "gone."

VICTORIA, B. C. (U.P.)—Seagulls, have opened a swimming school for crows on the waterfront here. The gulls show the crows how to alight on the water. They spring from a log into the water and back onto the log. The crows, after watching the performance, try it with varying degrees of success.
