12.55 **LESLIE'S GLASS DOES NOT STAND HOT WATER BETTER THAN A THIN ONE** And We Can Prove It!

A Thick Glass Does Not Stand Hot Water Better Than A Thin One.

The reverse is true. Glass is a bad conductor of heat. In a thick glass tumbler the inner layers of the glass are heated before the outer. Heat causes expansion, and the outer layers are burst by the expansion of the inner.

Would you be in hot water, if someone met with an accident on your property? Come in or phone us about insurance to protect you financially.
