

### McNeils Back From Mexico

Mrs. Bertha McNeil, 3313 Sonoma st., just returned from a vacation trip to Mexico. She was accompanied by her daughter and son, Jean and Jack, and a guest, Richard Meisel.

"From Tijuana we made the six hour trip to Acapulco where we spent two days enjoying water skiing, motor boating and swimming in the smooth surf at Caleta, Caletilla and La Roqueta. We watched a diver jump from the high cliffs at midnight and attended a bull fight and brought home a bull's ear as souvenir," Mrs. McNeil said.

"We made the trip from Acapulco to Mexico City in 45 minutes. While in Mexico City we hired English speaking guides and visited many wonderful and historic sights, including the Shrine of Our Lady Guadalupe, National Museum of History, Chapultepec Castle, the Pyramids of Sun and Moon, "The Citadel" and Pyramid of Quetzacoatl. We also enjoyed a tour of Mexico City's night clubs, modern office buildings. We went to the top of the world's highest building for a breath taking view of the city at night. We considered our trip to the modern University of Mexico and an evening spent at a jai-alai games, one of the highlights of our trip," she added.

"From Mexico we flew to Guadalajara, "the City of Eternal Spring" and the second largest city in Mexico. We took the four hour city tour, visiting the

Cathedral of the most unusual blends of 14 different styles of architecture on the Feast of Corpus Christie. We visited Tlaquepaque, a village that dates back to the fourth archeological horizon about 1000 years ago. We saw the pottery, and tile factories and watched the making of silver jewelry, copperware, leather, and textiles, furniture and tile. We took over 200 colored pictures and thoroughly enjoyed the charm of Mexico," she concluded.

### Dog Obedience Class Offered

The Torrance Jr. Novice Dog obedience class will begin on July 20, between 3:30-4:30 p.m. at Torrance and Madrona, beside the swimming pool.

The "people of Union Carbide" include the men and women who operate the Torrance plant of Union Carbide Chemicals Company.

### Keeping water out in the rain

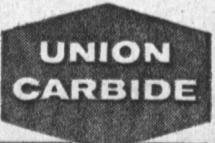

MASONRY WALLS made of brick, stone, or concrete have long stood the test of time. But today, they can be made even better with a coating of silicone water repellents. These amazing materials prevent damaging rainwater from entering the countless tiny pores or openings in masonry structures.

When the water freezes after penetrating, it can cause spalling—cracks off small pieces. And, if it seeps all the way through to the inside of a building, paint peels . . . woodwork warps . . . plaster stains and cracks.

Now, silicone water repellents provide the answer. Brushed or sprayed on the surface, they line—not seal—the pores in masonry. Even heavy rain driven by hurricane winds cannot break through . . . yet, because the pores are not sealed, moisture from within can evaporate freely.

The people of Union Carbide produce silicones for other uses, too . . . automobile and furniture polishes, lubricants, electrical insulation, and new rubber-like products . . . helping bring more and better things for all of us.
