

Torrance helps meet the steel needs of the West

Today, United States Steel operates mines and manufacturing plants throughout the West. In California, there are plants at Torrance, Long Beach, Los Angeles and Taft, and at Alameda, Fresno, Pittsburg and South San Francisco. They turn out plates, bars, sheets, strip, structural shapes, wire, wire rope and strand, nails, pipe, galvanized wire, tin plate, oil-well

pumps, shipping containers and the like. In addition, we have facilities in California for erecting steel structures of all types, including buildings, bridges, pipelines and dams.

Over the years, U.S. Steel has kept pace with the needs of the West. In the future as in the past, we will continue to cooperate with energy, enterprise and faith as your partner in progress.
