

UCLA Student Visits Scotland

James Scott, son of Mrs. B. J. Everett of Fresno and James R. Scott of Torrance, left last week for a summer's cruise with the Navy ROTC to Scotland, France and the Pacific Islands. The UCLA sophomore made the trip as part of a scholarship he won to Westwood, given by the Navy ROTC. Scott scored highest in Fresno County in the scholarship examination. Norfolk, Va., was Scott's embarkation point, and he will spend four days in Glasgow. Plans have been made to fly to London for a few days, and from there he will leave for Brest and Paris. Scott will return in September, landing in Virginia.

Mr. and Mrs. Bronson Buxton, 1509 El Prado Ave., are grandparents of the European traveler. At UCLA, Scott is a pledge of Beta Theta Pi.

Torrance Man Directs Army Munition Unit

First Lt. Walter Korsgaard, son of Mrs. Carla Korsgaard, 1827 Santa Fe Ave., is serving as commanding officer of the 40th Explosive Ordnance Disposal Detachment at Camp Drann, N. Y.

The camp is a field training ground for 60,000 army reservists and national guardsmen in the eight-state northeast corner of the nation. He will supervise removal of all unexploded shells and "duds" from the camp's artillery ranges this summer.

After his assignment ends, the lieutenant will return to Fort Niagara, N. Y. with his unit. A veteran of the Korean War, where he received a battlefield commission in 1952, the lieutenant served in four campaigns in the Oriental field of war.

Summer Heat Drops Water

Lawn waterers, lemonade and iced tea drinkers, and bathers last week brought the level of water in the city's ten million gallon reservoir near Greenwood Blvd. and Pacific Coast Hwy. to its lowest level since it was completed last October.

The spell of hot weather dropped the water level in the 28-foot reservoir to about three feet, according to Angus McVicar, water superintendent. The average amount of water in the reservoir is about 20 feet, he said.

If the reservoir were completely drained, McVicar said, water pressure in the city would drop. However, in this case, the city could open a bypass valve on the main line of the Metropolitan Water District, which would restore the pressure. Although water is constantly being pumped, both from the Metropolitan Water District, and from city wells, the reservoir maintains water pressure.
