A letter covering their stand is being sent to the Torrance City Council.

We wanted to make special

note of another matter handled at the Homeowners meeting. Our thanks to them for their action in supporting our attempt to get a branch library established here in Riviera. The "people of Union Carbide" include the men and women who operate the Torrance plant of Carbide and Carbon Chemicals Company.

The sun that never sets

FOR YEARS, movie makers have relied on the powerful carbon arc to light their motion picture studio sets. It gives them brilliant, man-made "sunlight" for use when and where it is needed.

Recently, Union Carbide—a pioneer in carbon-arc lighting—perfected a new yellow flame carbon arc for use in color photography. It gives off a perfectly balanced light which brings out true colors on today's sensitive film. This development has been recognized by the award of an "Oscar," symbol of highest achievement in the motion picture industry.

But the carbon arc is not limited to studio lighting alone. Its intense beam is also used to project the tiny picture on the film to the breathtaking realism and depth you see on theatre screens.

Many more uses of this amazing light have been developed—duplicating the effect of sunlight on new paint and textile colors . . . or analyzing the basic composition of a great many different materials. The scientists of Union Carbide will continue their research efforts to find new and better ways to make carbon serve all of us.
