The atom tests fuels for S. P.

One of the most important jobs we have at Southern Pacific is keeping our fleet of 2,000 diesel locomotives operating at peak efficiency. Recently we equipped two locomotives for standing tests with "hot" or radioactive piston rings. Geiger tubes count the particles of metal worn off the rings. As a result, we're now getting information in 6 to 8 hours that ordinary tests could give us only after 1 to 2 years. These tests, conducted jointly with Standard Oil Company of California, tell us the effects of different fuels, lubricants and improved engine parts on engine operation and wear.

Here is another example of how S. P. makes use of the latest developments in science to provide better, more dependable transportation—a complete, modern service that we'd like to have you try.

The 8-state Golden Empire served by Southern Pacific is one of the fastest-growing and most productive areas in the U. S. It is our job to match this vitality with dynamic, resourceful transportation service.
